

# Information Processing Pipeline Example

Domain:\*\* Project Management and Executive Decision Support\*\*  
Objective:\*\* Transforming raw, unstructured meeting notes into a \*\*  
structured, decision-ready output table while strictly avoiding  
.`hallucination and marking unknown gaps as `[Not Specified]

## Step 1: Raw Input (Messy Meeting Notes)

\*:Source text from a quick sync call\* <  
Hey team, had a quick chat about the new mobile app rollout. Sarah " <  
mentioned the UI designs are mostly done, but QA might need an extra week  
because of some login bugs. Bob said backend APIs are ready on staging.  
We need to check if the budget covers the extra server costs for AWS.  
Meeting ended abruptly when the fire alarm went off. Oh, also, someone  
".needs to follow up with marketing about the launch event date

## Step 2: Information Extraction & Gap Analysis

Task:\*\* Extract key entities, action items, statuses, and decision \*\* \*  
.points

Constraint:\*\* Do not invent facts. If a detail (like owner, \*\* \*  
deadline, or exact budget amount) is missing from the raw notes, label it  
.`precisely as `[Not Specified]

## Step 3: Decision-Ready Structured Output

| Workstream / Item         | Current Status                       | Identified Blockers / Risks                              | Action Required   | Owner | Deadline         |
|---------------------------|--------------------------------------|----------------------------------------------------------|-------------------|-------|------------------|
| UI / UX Design**          | Mostly done                          | `[Not Specified]`                                        | Finalize **       |       |                  |
|                           |                                      | `remaining UI elements                                   |                   | Sarah | `[Not Specified] |
| Quality Assurance (QA)**  | Delayed / At Risk                    | Potential 1-week **                                      |                   |       |                  |
|                           | delay due to login bugs              | Resolve login bugs and complete testing                  | `[Not             |       |                  |
|                           |                                      | `Specified]`                                             | `[Not Specified]  |       |                  |
| Backend API**             | Ready on staging                     | `[Not Specified]`                                        | Proceed with **   |       |                  |
|                           |                                      | `integration testing                                     |                   | Bob   | `[Not Specified] |
| Infrastructure & Budget** | Pending evaluation                   | Unclear if current **                                    |                   |       |                  |
|                           | budget covers extra AWS server costs | Review budget allocation for cloud                       |                   |       |                  |
|                           |                                      | `server costs                                            | `[Not Specified]` |       | `[Not Specified] |
| Marketing & Launch**      | Pending coordination                 | Launch event date is **                                  |                   |       |                  |
|                           | unconfirmed                          | Follow up with marketing regarding the launch event date |                   |       |                  |
|                           |                                      | ` `[Not Specified]`                                      | `[Not Specified]  |       |                  |

## Step 4: Human Sign-off & Attribution

Reviewed and Approved By:\*\* [Project Coordinator / Project Manager \*\* \*  
Name]

Job Title:\*\* Senior Project Coordinator\*\* \*

Approval Date:\*\* October 15, 2026\*\* \*

Supervisory Note:\*\* "I certify that this structured output has been \*\* \*  
accurately parsed from the raw notes without artificial extrapolation.  
All missing parameters have been explicitly marked as `[Not Specified]`  
".to maintain rigorous data integrity
